Unique Health Care Providers

Certified Athletic Trainers in your Community

"Health and success in school are interrelated. Schools cannot achieve their primary mission of education if students and staff are not healthy and fit physically, mentally and socially."

-National Association of State Boards of Education

Secondary school principals and administrators want their students to have every possible learning advantage. Parents expect it. Certified athletic trainers (ATC's) provide it.

Certified Athletic Trainers Provide Health Care for the Physically Active

- Athletic trainers are nationally certified by the Board of Certification
- Athletic training intervention significantly reduces re-injury rates. Outcomes data show that quick intervention, typical of ATCs, reduces time lost from non-surgical injuries.
- Athletic trainers have a long history of providing high-quality rehabilitation based on the specific tasks, knowledge and skills acquired through their nationally regulated and accredited educational process.
- Athletic trainers are employed by secondary schools, colleges and universities, professional sports organizations, military and law enforcement, the performing arts, industries, hospitals and physicians clinics

Mind and Body are Important

In a recent survey of principals and district superintendents, the National Athletic Trainer's Association found that 59 percent of the public secondary schools responding already had enlisted the services of an athletic trainer. Those administrators know certified athletic trainers can educate students about healthy lifestyles and proper nutrition, develop exercise regimens, advise how to prevent illness or injury during physical activity and provide quality, immediate care in case of an injury on the school grounds or at a school-sponsored athletic event.
