

Clinical trial participants like Savanna make it possible for Children's to continue discovering new and improved treatments.

Survival rates for children like Savanna significantly increase when they receive care from a comprehensive childhood cancer center like the one at Columbus Children's Hospital where clinical trials are the basis of an international, cutting-edge research program.

Children's provides infants, teenagers and young adults throughout Central Ohio access to the world's newest therapies without leaving home. For Savanna, receiving the best and most innovative treatment means taking part in a clinical trial.

Savanna is not alone. Over 90% of pediatric cancer patients are treated according to clinical trials. They have become the standard of care for children with cancer because they improve survival rates, decrease the complications and late effects of cancer treatments, and advance the science towards understanding and curing childhood cancer.
