

The brave face of childhood cancer, Logan grows stronger every day.

Logan has cancer and recently underwent a bone marrow transplant at Columbus Children's Hospital. He is one of more than 1,000 children currently receiving cancer treatment at Columbus Children's, Ohio's largest pediatric cancer program and one of the largest in the nation.

The good news is that more children like Logan are surviving cancer thanks in part, to dedicated bone marrow transplant programs, like the one at Columbus Children's Hospital. In fact, Children's is one of only a few pediatric cancer centers in the United States with a Bone Marrow Transplant program accredited by the Foundation for the Accreditation of Cellular Therapy. This means every child benefits from a dedicated team of doctors, nurses and social workers partnered with researchers and the latest treatment options to achieve the best possible outcome for every child.

Logan's prognosis is excellent. With his transplant and extensive rounds of chemotherapy behind him, he's now recovering at the Ronald McDonald House on the Children's campus. And each day he's one step closer to becoming the most recent Children's success story.

**Pediatric
HealthSource**

On the campus of Columbus Children's Hospital, the newly constructed Ronald McDonald House welcomed more than 1300 families last year. This inviting facility offers a home away from home for families of seriously ill children. Guests stay in 33 family rooms and 4 continuing care suites specially designed for transplant patients newly discharged from the hospital. Children's Hospital Homecare provides "house calls" at the Ronald McDonald House to help families transition to home.
