Recommended Genetic Testing Algorithm for Newborn Evaluation for Krabbe Disease

**Tier 1:**
GALC Gene Common 30-kb Deletion Detection by PCR
+ GALC Gene Sequencing

**Tier 2:**
GALC Gene Comprehensive Del/Dup Analysis by MLPA

**Tier 3:**
PSAP Gene Sequencing

Please note:
Above algorithm is the suggested testing algorithm for evaluating neonatal patients with positive newborn screening for Krabbe disease. However, any test can be ordered individually and in any order.
