Hollywood PUS

Your body sends white blood cells to surround and kill bacteria in a zit or blister. They float in a body fluid called serum that makes the pus liquid-y.

Into a small zipper-type plastic bag, place…
1 Tablespoon Shortening = SERUM
1/2 teaspoon Flour = DEAD SKIN CELLS
1/2 teaspoon Powdered Sugar = WHITE BLOOD CELLS
1/2 teaspoon dry Mustard Powder = BACTERIA

Zip up the bag and mash it all together.
Cut a tiny hole or pin prick in the corner of the bag.
Squirt it out onto a paper towel or paper plate. Ewww!

Real pus comes with real bacteria,
so if you find yourself with a pimple (pustule) don’t pick it!
Wash your hands often so you don’t spread the infection!
