

### **Acute COVID 19 Management**

**Emergency Department** 

Center for Clinical Excellence

When your child needs a hospital, everything matters. **Inclusion criteria:** Symptomatic patients with **Requires** positive testing for SARS **Inpatient** No Yes CoV-2 (home or lab) care? ED work-up: Age ≥ 28 days & Weight ≥ 3 kg & High Risk Condition oxygen No & ≤6 days of symptom onset? Discharge for supportive care at home Yes Consider patient eligibility for Judicious IVF Paxlovid or Remdesivir May prevent hospitalization Requires supplemental oxygen/respiratory support **OR** has signs of shock/ No Family wants organ failure? to proceed with treatment? Discharge for Supportive care supportive care and meds† per at home Yes inpatient team Call PCTC to connect to ID attending to decide on specific therapy (if eligible for Paxlovid can prescribe without calling PCTC) Nurse practitioner or pharmacist will contact family to discuss therapies **ED Clinician:** 

- CBC with diff, CMP, prothrombin time for patients with **high-risk condition** or requiring supplemental
- CXR for patients requiring supplemental oxygen or with persistent tachycardia despite IVF
- **FARVPP** (do not need to wait for results)

### Care as indicated:

- Antibiotics per NCH standards of care
- Oxygen and respiratory support as indicated

Yes

If there will be delay in

admission, call ID Fellow

to discuss time sensitive

medications†

**Admit** to ID, PICU or subspecialty service as indicated

### †Meds may include:

#### **Dexamethasone**

0.15 mg/kg/dose (IV or PO), max 6 mg

### Remdesivir:

- < 3 kg per ID recs
- 3-<40kg 5 mg/kg IV loading dose (max 200 mg)
- ≥ 40 kg 200 mg IV loading dose

CPP-ED-UC COVID-19 Management Clinical Pathway Published: 10/1/2021; Revised: 1/31/2024

Inform family that a pharmacist or nurse

practitioner will call to discuss treatment

Ensure accurate phone number in Epic

## **Inclusion & Exclusion Criteria**

### Inclusion criteria:

 Symptomatic patients with positive testing for SARS CoV-2 (home or lab)

### **Exclusion Criteria:**

- Asymptomatic patients with SARS CoV-2
- Patients with illness not related to SARS CoV-2
- Neonates
- Patients with concern for MIS-C

# **High Risk Condition**

### Strong Association with Progression to Severe COVID-19 (particularly if never vaccinated for COVID-19):

- Moderate or severe immunocompromise (see definitions below)<sup>a</sup>
- Severe congenital or acquired heart disease (see definitions below)<sup>b</sup>
- Obesity (BMI ≥30 kg/m² or ≥95<sup>th</sup> percentile for age see table below)<sup>c</sup>
- Medical complexity with dependence on respiratory technology
- Severe neurologic, genetic, metabolic, or other disability that results in impaired airway clearance or limitations in self-care or activities of daily living
- Severe asthma or other severe chronic lung disease requiring ≥2 inhaled or ≥1 systemic medications daily

### Moderate or Inconsistent Association with Progression to Severe COVID-19: consider treatment on case-by-case basis<sup>d</sup>

- Sickle cell disease
- Diabetes (poorly controlled)
- Prematurity and age ≤2 years

#### Footnotes:

<sup>a</sup>Moderate/Severe Immunocompromise:

- Receiving active systemic anti-cancer treatment for hematologic malignancies or solid tumors resulting in significant immunosuppression or unlikely to have responded to COVID-19 vaccination
- Solid organ transplant within the past 3 months or lung transplant recipient at any time, receiving immunosuppressive therapy
- Bone marrow transplant or chimeric antigen receptor T cell (CART-cell) therapy recipient within the past 12 months or within 2 years and receiving immunosuppressive therapies
- Primary immunodeficiency disorder with profound T or B cell dysfunction
- T-cell depleting therapy with CD4 count <300 cells/mm<sup>3</sup> or, for children, <15%</li>
- B-cell depleting therapy within the past 6 months and no evidence of B cell recovery
- Systemic corticosteroids with prednisone equivalent of ≥20 mg/day or ≥2 mg/kg/day for ≥ 14 days
- Advanced or untreated HIV

### <sup>b</sup>Severe Heart Disease:

- Uncorrected or palliated cyanotic CHD
- Hemodynamically significant CHD
- One pumping chamber
- Heart failure
- Significant pulmonary hypertension requiring vasodilatory therapy

<sup>d</sup>Consider factors such as severity of underlying condition, presence of additional chronic conditions potentially associated with severe COVID-19 (i.e., overweight; non-severe cardiac, pulmonary, neurologic, or metabolic disease; immunosuppression not meeting the definition of moderate/severe), and COVID-19 vaccination status when assessing individual benefit vs risk of treatment.

**ED Management** 

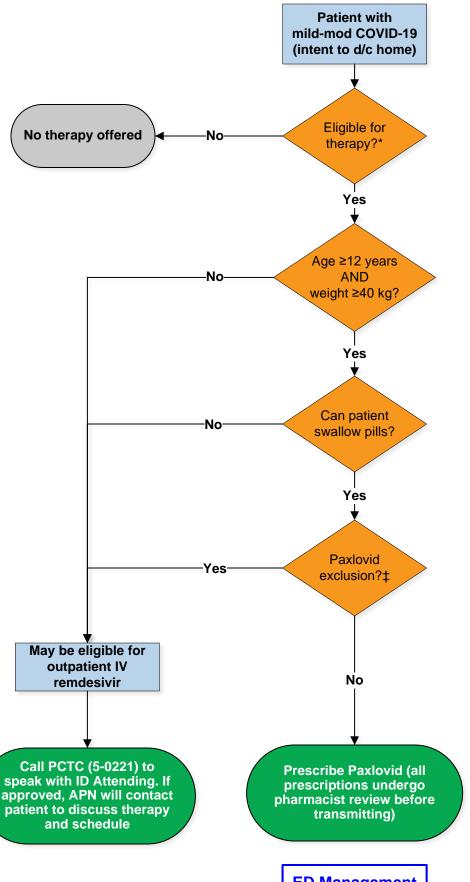

### <sup>c</sup>Obesity Definitions by BMI:

Age	BMI: weight in kg/(height in m) <sup>2</sup>			
Age	Male	Female		
2	19.3	19.1		
3	18.2	18.3		
4	17.8	18		
5	17.9	19.3		
6	18.4	18.8		
7	19.2	19.7		
8	20.1	20.7		
9	21.1	21.8		
10	22.2	23		
11	23.2	24.1		
12	24.2	25.3		
13	25.2	26.3		
14	26	27.3		
15	26.8	28.1		
16	27.6	28.9		
17	28.3	29.6		
18	29	30		
19	29.7	30		
20+	30	30		

# **Indications for Admission**

- Lower resp sxs & abnormal CXR & high risk condition
- Oxygen requirement
- Dyspnea
- Tachycardia
- Sepsis, organ failure
- Altered mental status

## **Outpatient Treatment Management**

### \*Eligibility Criteria

- ≥28 days old
- ≥3 kg
- Mild-mod COVID-19 symptoms (starting ≤6 days ago)
- Positive viral test (lab or home
- **High risk condition**

3 pills BID x 5d Pills CANNOT be chewed, broken, or crushed

### **‡Paxlovid exclusions:**

- Symptoms started >5 days ago
- Transplant & currently on immunosuppressive therapy
- Pregnancy
- Malabsorption
- Multiple potential drug interactions - please discuss with ED Pharmacist

# **Outpatient COVID Therapies**

### Outpatient treatments for mild-moderate COVID-19 are available for patients who meet the following general criteria:

- An underlying risk factor for progression to severe disease, available on Anchor or NCH website
- Symptoms of COVID-19 and a positive viral test for SARS-CoV-2 (including home tests)
- Not hospitalized due to COVID-19, requiring oxygen therapy due to COVID-19, or requiring an increase in oxygen flow rate due to COVID-19 (for those on chronic oxygen therapy)

Drug Name	Minimum Age	Minimum Weight	Additional Criteria	Contraindication/Precaution	How to Access†
Paxlovid (nirmatrelvir & ritonavir)	12 years	40 kg	<ul> <li>Able to start treatment within 5 days of symptom onset</li> <li>Able to swallow pills whole</li> </ul>	Contraindications:  Transplant & currently on immunosuppressive therapy  Pregnancy  Malabsorption  Many drug-drug interactions	Call Physician Direct Connect (614-355-0221) and speak to an ID physician or prescribe to retail pharmacy or NCH Blue pharmacy <sup>‡</sup>
IV Remdesivir (3-day course)	28 days	3 kg	Able to start treatment within 7 days of symptom onset	Precautions:  Transaminase elevation  PT prolongation	Call Physician Direct Connect (614-355-0221) and speak to an ID physician

<sup>&</sup>lt;sup>†</sup>For NCH inpatients with COVID-19 but NOT hospitalized because of COVID-19, and who are otherwise eligible for outpatient therapy, contact the ID consult team. If treatment recommended, bebtelovimab and remdesivir can be ordered in Epic; for Paxlovid, work with clinical pharmacist to complete review of potential drug-drug interactions and facilitate ordering.

<sup>¶</sup>Review contraindications before prescribing. If obtained through ID via Physician Direct Connect, pharmacy review occurs routinely prior to prescribing.

†Clinicians may prescribe Paxlovid to retail pharmacies or NCH Blue pharmacy without speaking to NCH ID. All prescriptions written in NCH Epic will undergo pharmacist review prior to transmission to the pharmacy.

# **Quality Metrics**

### Goal:

 Identify patients with COVID-19 who are at high risk for severe disease and provide optimal evaluation and treatment.

### **Process Measures:**

- Pathway visualization
- Order set utilization
- Paxlovid prescription rate for high-risk patients
- Pharmacist utilization of Paxlovid dot phrase

### Outcome measures:

- ED return visits for respiratory symptoms within 72 hours
- Treatment with antibiotics

### **Balancing measure:**

ED LOS

## Pathway Team & Process

### **Content Development Team:**

Leaders:

Infectious Diseases:

Josh Watson, MD Guliz Erdem, MD

Emergency Medicine:

Berkeley Bennett, MD, MS

Hematology:

Amanda Sankar, MD

**Clinical Pathways Program:** 

Medical Director – Emergency Medicine:

Berkeley Bennett, MD, MS

Medical Director – Clinical Informatics & Emergency Medicine:

Laura Rust, MD, MPH

Physician Informatics:

Kathy Nuss, MD

Business & Development Manager:

Rekha Voruganti, MBOE, LSSBB

**Program Coordinators:** 

Tahje Brown, MBA Tara Dinh, BS

**Clinical Pathway Approved:** 

Medical Director - Associate Chief Quality Officer, Center for

Clinical Excellence:

Ryan Bode, MD, MBOE

Origination Date: October, 2021

Last Revision: January, 2024

Next Revision Date: January, 2027

### **Clinical Pathway Development**

This clinical pathway was developed using the process described in the NCH Clinical Pathway Development Manual Version 6, 2022. Clinical Pathways at Nationwide Children's Hospital (NCH) are standards which provide general guidance to clinicians. Patient choice, clinician judgment, and other relevant factors in diagnosing and treating patients remain central to the selection of diagnostic tests and therapy. The ordering provider assumes all risks associates with care decisions. NCH assumes no responsibility for any adverse consequences, errors, or omissions that may arise from the use or reliance on these guidelines. NCH's clinical pathways are reviewed periodically for consistency with new evidence; however, new developments may not be represented, and NCH makes no guarantees, representations, or warranties with respect to the information provided in this clinical pathway.
