Unparalleled Care Environment

Nationwide Children’s Hospital is a 12 story hospital with an additional 3.2 million square feet of clinical space. We have three freestanding research facilities to support our top 10 NIH-funded research institute.

Alongside our commitment and dedication to patient care, our campus offers an unparalleled opportunity to practice in state-of -the-art facilities that define what’s possible in patient care.

Private patient rooms are nearly 300 square feet. Each room features a LED-lit headboard, a sleep recliner and a large couch that folds out to comfortably sleep two adults.

Located in the lower level, the cafeteria offers patients, families, visitors and staff a wide variety of food offerings at all hours of the day. Seating is provided in the spacious dining room, as well as the outdoor courtyard, weather permitting.

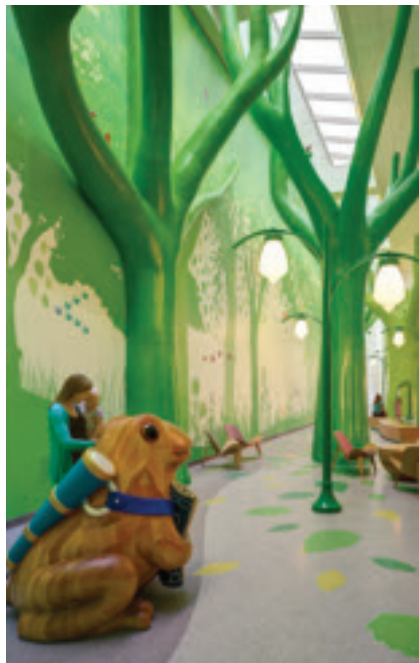

Our Emergency Department is home to Ohio’s first Level 1 pediatric trauma center. This state-of-the-art space features 62 exam rooms and a family-centered waiting area featuring a 1,400-gallon fish tank.

Our third research building consists of 225,000 square feet and six floors of state-of-the-art bench laboratory space, sophisticated support facilities and ample office, support and administrative space. This adds to 375,000 square feet of existing research space.

Our hospital cares for over a million patients every year.

In the “Magic Forest” respite area, families can escape the stress of pediatric illness. Children can hunt for butterflies, birds and other animal images hidden throughout the space and play among the trees. Lighting and sound within the space change throughout the day and evening so no two visits are the same.

Critical care rooms have the latest technology to optimize clinical practice and patient safety.

On the 9th floor, our rehabilitation area is unlike any other – with a gym, rock-climbing wall, home kitchen, school-lunch line, restaurant seating and a full-scale car.

Our heated-surface helipad can accommodate a Black Hawk helicopter. The elevator delivery system is equipped with a rapid call system for immediate access from the helipad to the trauma room.
