

Laboratory Services Important Test Announcement

DISCONTINUATION OF STOOL ROTAVIRUS ANTIGEN TESTING (ROTAV)

Test Code: ROTAV

Live Date: 3/10/2025

Beginning 3/10/2025, NCH Immunoserology will no longer perform Rotavirus antigen testing on stool (ROTAV). Low and declining orders do not support the continued test offering.

Requests for Rotavirus antigen testing will only be available as a Miscellaneous Reference Lab Test. The gastrointestinal molecular panel (GIIA) detects Rotavirus in addition to other GI pathogens. Refer to the Laboratory Test Directory for details about GIIA and other testing for gastroenteritis.

If you have any additional questions about this change, please contact Laboratory Client Services (614-722-5477) to be directed to the Clinical Microbiology Director on service.
